Configure Mac OS X Devices for secure Wi-Fi access

The following instructions will allow you to connect your personal Mac OS X device to the ECSD-Priv wireless network.

Configuration instructions:

1. Click the Wi-Fi icon 📶 at the top right hand corner of the screen.

2. You will then be presented with a list of available networks. From the list, select "**ECSD-Priv**". If you do not see a list of available networks, please check that the Wi-Fi is turned on.

3. You will be prompted to input a **username** and **password**. Please enter your ECSD username, e.g. "id18774", and your password.
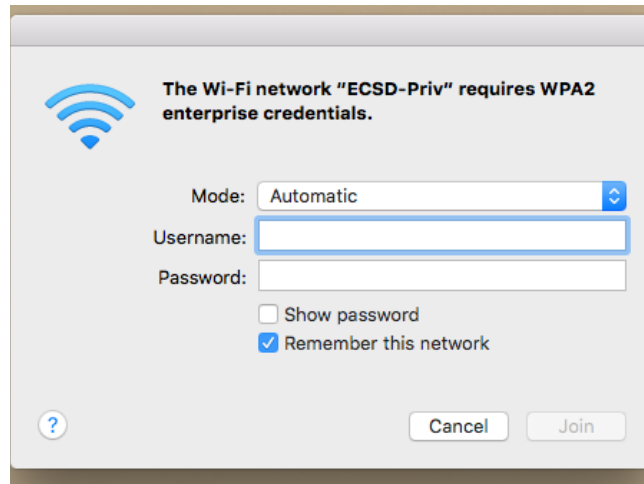

4. Click "**Join**".

5. If you are connecting for the first time, your computer has not yet accepted the certificate that encrypts the connection. It will show a Windows Security warning prompting to **Verify Certificate**

- Please verify the certificate name is "**wifiguest.ecsd.net**" before accepting it.
- Click **Continue** in order to trust the certificate and connect to the network.
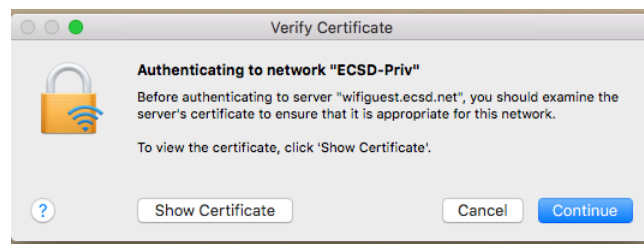

6. After accepting the certificate, you will notice that ECSD-Priv shows **Connected.**

NOTE: Please note that these instructions were taken with a Mac OS X El Capitan – version 10.11.5

Your device should now connect automatically to the ECSD-Priv wireless network whenever it is in range.
